INTRODUCTION

EXPLANATION OF THE CURRICULUM OUTLINE

The **SCORE Curriculum Outline for Pediatric Surgery** is a list of **pediatric surgery patient care topics** to be covered in a two-year pediatric surgery training program. The list will be updated periodically to ensure that it remains contemporary.

The outline has been created with input from the Pediatric Surgery Board of the American Board of Surgery, the Association of Pediatric Surgery Training Program Directors, and the American Pediatric Surgical Association to define the knowledge and skills to be acquired by a pediatric surgery fellow by completion of training.

With help from these groups, [patient care modules](#) have been developed covering these topics on the SCORE Portal, containing learning objectives and key points, along with text, video and image resources. Discussion questions and multiple-choice self-assessment questions are also available to trainees to assess their understanding of the topic. Additional modules will be developed until all topics below are covered. For more information, see www.surgicalcore.org.
